

Case Study

House of Porters

Antwerp | Belgium

Objective | to achieve the highest level of luxury and comfort in an atmosphere of stylish abundance.

Description | Master decorator Pieter Porter is renowned for his sumptuous, full, anglo-french baroc style. The House of Porters is an Antwerp mansion that holds a show room, a flower workshop, a lounge and three lavish hotel suites. Every suite is designed so as to submerge the guests in an ambiance of complete indulgence whilst making them feel completely at home.

Each of the suites has its own style: French, English, and Oriental. Every suite has its TELETASK home automation installation which controls lights and temperature. A push on the designated button will call room service to take the guests' orders. In the suites you will find the LATUS touch windows. A SERVUS at the reception controls the entire building (including the show room). It has access control and a security camera integrated.

Project Data

Special Features

- Local mood "Arrival"
While the guests are still checking in, the suite's temperature is already brought to comfort level.
- Local mood "Romance"
One push on the designated button and lights in the chandelier are dimmed, the fire place starts burning and the curtains are closed.
