

TELETASK

trendsetter in domotics

Case Study

TELETASK Offices

Gent | Belgium

Objective | to create a productive atmosphere by optimizing light, temperature and safety.

Description | The TELETASK offices are located in an old factory building. Upon purchase in 2002, the TELETASK management decided to completely refurbish the edifice. The cachet of the old building has been combined with the high tech domotics. The end result is open and pleasant workspaces, a grand show room, comfortable training and seminar rooms, etc.

The TELETASK offices proffer perfect working conditions by integrating light control, heating/cooling control and access control. The blinds in the training room are controlled by the domotics system, as are the motorised windows in the show room and meeting room. The high level of integration is at every one's disposal. Every room is equipped with a LATUS and every employee has his/her own GUI on his/her PC. On top of that, the management has total control over the building by means of a prestigious desk mounted SERVUS and ILLUS units.

Project Data

Special Features

- Individual Access control
Access to the TELETASK building is controlled with proximity readers. The security system is integrated with the domotics system thus allowing of high level security. Only a customised proximity card will allow one designated person to enable and disable the security system.
- A special 'Visitors' button
This button activates the showroom: all equipment is switched to stand-by mode, while the temperature reaches comfort level.
- Reducing fire hazard
All mayor electric devices are automatically switched off, when the last person leaves the building.
- Company Bar
The company bar is equipped with integrated music features.
