## A/V control

*Enjoy your senses.*

*EArriving at home while your favourite music is playing, the children are enjoying their music in their room or in bath while you are enjoying the latest CD of your band in the living room. Or listening to the radio anywhere you like. Connected to the world, wherever you are in your house. These are just a couple of applications of the multi-room/multi-source audio/video possibilities of your TELETASK integrated system.*

TELETASK offers you from budget friendly till the most exclusive multi-room (several rooms) / multi-source (several sources) audio/video solutions.

Imagine that you are listening to the newsflash in the kitchen while there is music in the shower and your partner is enjoying his favourite DVD in the home theatre.

To control several A/V (Audio/Video) appliances, TELETASK has a range of integrated solutions available:

Standard A/V appliances can be controlled by the use of Infra Red Flashers (by using the TELETASK learnable A/V interface). The more professional A/V systems provided with an RS-232- or IP-connection

communicate based on configured protocols. TELETASK disposes also of a number of specific A/V interfaces for systems like BOSE, Xantech, Bang & Olufson and many more.

### Control

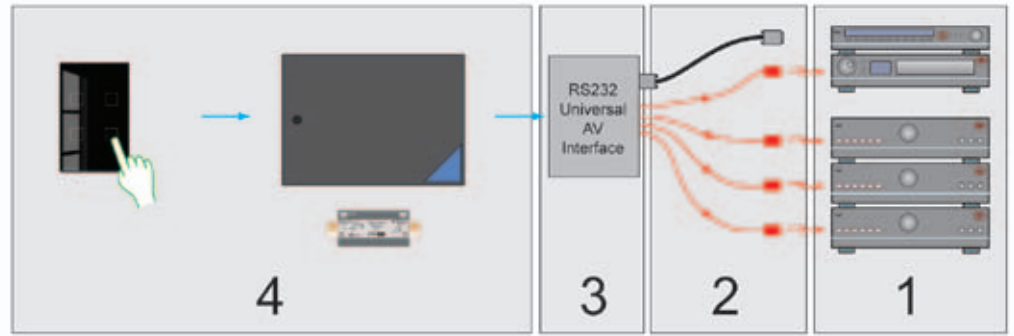

The A/V appliances can be controlled by any standard momentary switch on your wall, by a specific touch panel, touch screen, an Apple iPod touch and iPhone/Smartphone or by the graphical interface on a PC. Due to the full integration of the A/V control in your domotics system it won't be needed to add other buttons or separated control panels of A/V appliances on your walls. TELETASK always keeps your walls stylish and sober.

You are cooking a diner in the kitchen and someone rings at the gate or front door, so your portable phone may start ringing. You push on the provided 'mute' button on the kitchen wall and the audio sound will mute until you press again on this button. So there is no need to run towards your audio system before you can answer the phone or open the door. If you like, the A/V volume will lower automatically when somebody rings at

the door or when you receive a phone call (in one or more of the predefined zones). You decide and the changes in the configuration can be easily done at any time. Entering your home with your favourite music (the A/V system is activated as soon the TELETASK domotics system has recognised your access badge) is a possibility.

What do you think about a relaxing evening with friends while a specific playlist is active? You only have to select the preferred scene and you can enjoy an evening with the desired mood settings (lights, music, temperature,...). It doesn't matter if you have one, two, ten or 50 items controlled in such a scene. For you it is only one button. Or maybe you like to hear every radio- or newsflash that automatically starts up when it's time. So you won't miss any news fact anymore.

#### Remote control

TELETASK has a compact and an extended IR remote control available. Both in a glossy white design. Next to all the domotics functions, you can also control the outdoor music, garden lights, pool lighting, etc... with your Apple iPod touch, Apple iPhone or Windows mobile Smartphone. Thanks to this integration you have not only the iTunes and Apple-TV but also your domotics system in your hand. All the above-mentioned functions are also controllable by your PC. Easy as that. Even when you are far away from home you can control your complete house, A/V appliances included.

#### Technical

The TDS14042 universal AV interface has the possibility to connect 8 IR-flashers per unit to control the sources and amplifiers and has a RS232 Port. The integrator can put in the protocols of the connected A/V appliances himself. This interface is also very suitable for home cinema and professional High-End installations.
